**Subject:** RE: Miller Chemical - Update!

Tony,

We are currently discussing the Pottstown option. I will get back to you and Sarah with any updates on Pottstown.

**Subject:** Miller Chemical - Update!

Victor:

My apologies for missing your voice mail on Friday. Your voice mail indicated that you may have good new with Exeter and Pottstown.

Sarah passed on your message Friday about Exeter and we have been shipping to them all weekend.

Wanted to follow up on the Pottstown comment. Do you have any information that you can share with me about Pottstown?

Kind Regards

Tony

**Subject:** RE: Disposal Contact Information

Here are more options for wastewater disposal. Not sure if anyone has reached out to these facilities.

**Subject:** Disposal Contact Information

All,

As we all work towards finding disposal options for this material I'd like us to all be on the same page for whose talked to who. In that vein if the consultants for Miller could reply to the Department with whom you've talked to and what the limitations are for the acceptance of the materials we can work through some of those issues with the facilities. Additionally as the Department finds sites please distribute them to this list so that we're not duplicating efforts. The Department can facilitate conversations with the disposal facilities but we are going to be expecting Miller and/or their consultants to prepare the Form U paperwork and facilitate the business side of the discussions with the facilities as well as transportation.

To that end I have already forwarded several contacts this morning and there is an e-mail with additional contacts attached to this one for facilities up in the Northcentral region. Additionally, I have spoken with our District Mining Manager, and initially he didn't see an issue with using the water on mine reclamation sites however he would need 'loading rates' for the limiting nutrient or metal compounds so that they can apply it appropriately. Our Waste staff is working with Central office on some of that but if Miller and/or their consultants can come up with an applicable loading rate for the nutrient compounds that can be reviewed it would be helpful. Once I get the information on the Ammonia, TKN and Phosphorus it will be easier but if you can do a preliminary one based upon the frac tank water as a worst case scenario it may prove helpful.

If anyone has any additional questions please let me know.

Brian
